UNIVERSE ORIGINATED FROM VACUUM.
MAN ORIGINATED FROM THE UNIVERSE.

[So, the spirit and soul in man scientifically are from the universe.]

10 uniqueness of man unlike an animal

1. The Personality of man

↓

2. The Mind of man

7. The better Brain system of man

↓

8. The man of Law with Rationality

↓

9. Speaking within, Speaking externally, and Speaking upon (attitudes) in man

↓

10. The Superanimal life in man

1. The Personality of man

The vacuum motions moved for the creation of the universe, the replica of which is superimposed or set in man and is manifested as his personality. The personality of man is constituted with six components, such as:

(i) intellect,
(ii) emotion,
(iii) willpower,
(iv) mind,
(v) conscience, and
(vi) internal utterance.

2. The Mind of man

The vacuum conflicts moved for the creation of the universe, the replica of which is superimposed or set in man and is manifested as his mind. The mind of man is the central part of the personality of man.

3. The Conscience of man

The motion of knowledge, divided and split into good and evil knowledge, moved for the creation of the universe, the replica of which is superimposed or set in man and is manifested as his conscience. There are seven standards of conscience:

(i) **The Outer Conscience** in a grown-up man from 18 years of age

(ii) **The Regained Childhood Conscience**, which can be regained through rebirth (born-again experience), and even through the practice of *tapasya* and unique knowledge, can be attained from 12 years of age. [In everyone, the Childhood Conscience is in sleeping state, even in dead state from 12 years of age.]

(iii) **The Subconscience** (not *subconscious)*: If the Outer Conscience is based on the concentrated ideas in man, the Subconscience is based on the concentrated ideologies in man.

(iv) **The Root Conscience:** If anyone's individual conscience is in maximum development in relation to the function of the universe against all the possible omissions, it is made applicable to man at its zenith as the Root Conscience in man.

(v) **The Universal Conscience:** If any man plunges into the universe and swallows it, he can obtain the Universal Conscience, but it is a very rare action among mankind.

(vi) **The Superconscience** is a very unique conscience in a unique man, who is with the conflict of good knowledge in depth against evil knowledge in depth.

(vii) **The Eternal Conscience** is a very unique conscience in a very unique man as the Conscience of old, even from everlasting.

4. The Soul of man

The Soul of man is the constituted state of four aspects:

(i) the replica of the filled-up waves of hidden knowledge that is constituted behind the universe,

(ii) the replica of the filled-up waves of knowledge for the universe,

(iii) the replica of the filled-up waves of ideologies in the universe, and

(iv) the replica of the filled-up waves of hidden ideas that are developed in man.

The above-mentioned four aspects are together in a unique man as his unique soul. This kind of man is surely with intuition and so with different branches of knowledge through intuition. ***But for a normal man, his soul together constitutes knowledge, ideologies, and ideas, all of which are to be developed in him within his inner heart through informal knowledge at first and through formal knowledge.***

5. The Human Heart

The motion moved for the banging out of voice in the process of creation of the universe, the replica of which is superimposed or set in man as his self-voice of language life, which is concentrated within him as the human heart.

6. The Spoken Language life in man

The motion of the filled-up great booming voices, possessing incredibly great power and invincibly and exceedingly surpassing energy, which constitute the voice realm of the universe and the universe of space, the replica of which is superimposed or set in man as his voice power. This replica is manifested as the orderly arranged and grammatically articulated spoken language life, a distinctive manifestation on earth found exclusively in man.

7. The better Brain System of man

The cohesive motion arises from the conflict of ideas and actions through the friction of positive and negative forces in action for the setting of the neutral elements in the universe, the replica of which is superimposed or set in man as the friction and conflict within him. Being endowed with rationality and ideology, man possesses a better brain system, distingushed by its superior acceleration.

8. The man of Law with Rationality

The actions are generated through positive and negative friction, filled up and concealed with their respective standards of triangular motion, the replica of which is superimposed or set in man. Through this replica, man is maintained under the Law of intellect, which is related to rational power, and stands as a man of Law, warring positively against the negative elements within himself.

9. Speaking within, Speaking externally, and Speaking upon (attitudes) in man

The audible, visible, and tangible motions are in the Universe of neutral elements, the replica of which is superimposed or set in man, manifested through speaking within, speaking externally, and speaking upon through his attitudes and gestures.

10. The Superanimal life in man

The motion and velocity moved for the amplification of the Universal Ocean of unquenchable fire finally to be cooled down for the formation and setting of the Matter Universe. The replica of this action is superimposed or set in man, manifested as the superanimal life in his man of figure.

↓

The external life of man of figure in his biological life is similar to that of the beast, which has the set nature of instincts upon them through the superior brooding life from the Sound Energy from the environmental nature. Like every beast, every man experiences both the clinical death and molecular death, first in amoebaic life and then in plasmaic life. **The medical realm deals with this external life of man, which is his biological life.**
